

Solid Internet

Reliable Business Internet. Made Simple.

Keep your video meetings stable, your cloud systems responsive, and your business running without interruption.

THE CHALLENGE

Modern business depends on consistent connectivity

Cloud platforms, video conferencing, collaboration tools, remote access, large file transfers — all rely on stable internet. Yet most offices depend on a single connection, leaving performance vulnerable to congestion and outages.

Video calls freeze

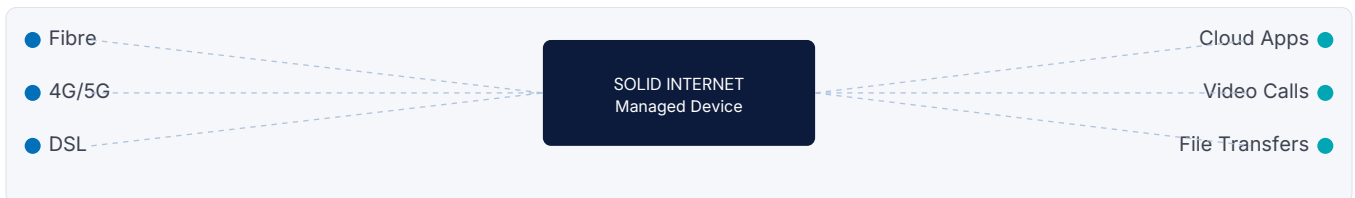

Cloud systems slow

Uploads stall

THE SOLUTION

Introducing Solid Internet

Solid Internet intelligently manages multiple internet connections simultaneously. Traffic is distributed across available paths automatically. If one line slows or fails, your applications continue — without manual intervention.

- ✓ Stable cloud performance
- ✓ Smooth video meetings
- ✓ Reliable transfers
- ✓ Auto failover

Why Businesses Choose Solid Internet

Consistent Performance

Steady cloud and video responsiveness during busy network conditions.

Increased Capacity

All available connections used together to support demanding workloads.

Automatic Continuity

Seamless failover without manual intervention.

Connection Resilience

Reduced impact of instability from individual links.

Managed & Monitored

Centralised oversight with proactive guidance from Comet Technology.

Secure Architecture

Traffic encrypted and under your control at all times.

COMPATIBILITY

Works with any combination

Fibre

DSL

Cable

4G / 5G

Wi-Fi as WAN

Satellite

Carrier-agnostic. Flexible. Designed around your site.

Ideal For

- Business offices (11–25 team)
- Airbnb & short-stay properties
- Boutique hotels
- Shared offices & coworking spaces
- Journalists & live streaming
- Educators & online learning
- Emergency & civil defence vehicles

What You Need

- ✓ Two or more internet connections
- ✓ Solid Internet device on-site

We handle configuration, monitoring, and optimisation. No internal IT complexity required.
